

HMOZ AMISYS INTEGRATION

HMOZ is setting a new standard for the health plan industry, providing sales and marketing solutions integrated with Amisys that manage sophisticated processing requirements, including consumer-directed healthcare products. It offers small, medium and large payers a comprehensive, robust and flexible way to meet their information needs.

"Consumer-directed products require health plans to quickly complete automation initiatives and reconfigure their operations and services to address new requirements," said Kevin R. Brown, president and CEO of Amisys Synertech. "But, because the market is developing so rapidly, they often don't have the time or resources to take advantage of the opportunities." HMOZ solution is easy to integrate with and it enables a health plan to quickly establish a presence in the consumer-directed market before the competition.

HMOZ Amisys Integration Services include a broad range of technology and consulting solutions that help you connect your disparate technologies and applications with your stakeholders and remove ad hoc process to make the most of your IT investments. When you work with us, you will find our solutions flexible, collaborative and pragmatic. Our integration services support all major package applications including Amisys. HMOZ system imports from Amisys information on claims, services, providers, membership, divisions, groups, authorizations, eligibility, rates and riders, invoices, phone logs, pharmacy claims, etc.

HMOZ brings the power of your back end claims processing to the front end. Sales and marketing reps have everything in one place, marketing reports, trends, and all necessary data on members, providers, subscribers and brokers. MCO reps can easily find sold groups, which purchased a certain product and use them as reference to sell a similar product to a new group. Amisys integration gives sales reps the ability to monitor if there is an increase or decrease in membership and premiums.

We bring our knowledge of all core healthcare processes, robust project management experience, in-depth integration and technology expertise, and extensive experience in working with health plan organizations.
